Every year global enterprises experience incidents that upset their operations, resulting in delays and added costs that can affect their profitability. These include supply chain disruptions, cyber-attacks, workplace violence, and extended critical infrastructure outages associated with extreme weather events and natural disasters. Complex and advanced enterprises need to incorporate resilience best practices across all operations and throughout their workforce in order to have a competitive advantage in these turbulent times.

The Global Resilience Institute (GRI) is a leader in identifying, refining, and validating resilience best practices and innovations. GRI leverages the expertise from researchers and expert practitioners worldwide, covering a wide range of disciplines to anticipate vulnerabilities; devise mitigation measures; and inform response, recovery, and adaptation when disasters strike. GRI works with organizations of all types to bolster their capacity to successfully deal with disruptive threats to both internal and market-facing operations and business models.

GRI’s Enterprise Solutions cover three main areas: 1) Enterprise Resilience Assessment & Planning; 2) Business Continuity and Recovery Planning; and 3) Comprehensive Post-Incident Assessment.

**Enterprise Resilience Assessment & Planning**

GRI experts work with managers to develop a function-focused, systems-of-systems approach to understanding how potentially disruptive threats can impact internal and customer-facing operations. The assessment identifies a comprehensive range of potential threats, the characteristics of these threats, the likelihood of occurrence, and the underlying vulnerabilities that can potentially magnify the affect and duration of the disruption. A comprehensive Enterprise Resilience Action Plan is then developed to define and prioritize cost-effective and sustainable actions to mitigate and manage such disruptions.

**Business Continuity and Recovery Planning**

Implementing a comprehensive Enterprise Resilience Action Plan reduces risk and vulnerability to disruption of business operations. However, incidents will unfortunately continue to occur that threaten the health of companies and organizations globally. Our experts will work with enterprise management to create a detailed action-focused Business Continuity and Recovery (Disaster) Plan to support real time incident management and to accelerate full recovery to minimize losses.

**Comprehensive Post Incident Assessment**

Despite the best planning and incident management, disruption to enterprise operations from one or more natural and/or man-made causes is inevitable in our turbulent times. But each occurrence creates an opportunity to learn. GRI’s Comprehensive Post Incident Assessment expert teams will examine what went well and identify shortcomings in resilience planning and incident response. Lessons learned and the resulting recommendations detailing best practices for post-disaster adaptation can then inform updates to both resilience planning and business continuity and recovery planning processes. The end result is increased resilience, less risk to enterprise operations, and an overall enhanced competitive position moving forward.

**About GRI**

Launched in 2017 with the approval of Northeastern University’s Board of Directors, the Global Resilience Institute (GRI) is the world’s first university-wide institute to respond to the resilience imperative. Today, GRI undertakes multi-disciplinary resilience research and education efforts that draws on the latest findings from network science, health sciences, coastal and urban sustainability, engineering, cybersecurity and privacy, social and behavioral sciences, public policy, urban affairs, business, law, game design, architecture, and geospatial analysis.
